Aman Goswami

Front-end developer and network security learner · Amaravati and Silchar, India

github.com/ErinOP-gltich amanopp0690@gmail.com +91 80119 24517

aman.24bce7313@vitapstudent.ac.in

Third-year computer science student who builds software real people run: the website, admin console and inventory system for a university lab (now at pcbl.net), a sibling site for a second lab, a website for a solar lighting company, a macOS notch app, and a marketplace startup for architects. Studying for CCNA and Security+, with hands-on routing, NAS and home-lab work.

EDUCATION

VIT-AP University 2024 to present

B.Tech, Computer Science and Engineering. Third year.

SELECTED PROJECTS

PCBL lab website and console · Built the site, the console and the database rules — Live

— Public site plus a login-only console that edits every line of text
— Post a paper by DOI and its details fill themselves in

HTML, CSS, JavaScript, Supabase, Cloudflare Pages

Lab inventory system · Built the app, the database rules and the notifications — Live

— One sign-in page: admins get the console, students get their items
— Lab stock with quantities, low-stock levels and expiry dates

JavaScript, Supabase, Edge Functions, Cloudflare Pages

Green Sun Technologies · Designed and built the company's website — Live

— A rotary wattage dial for the street lights, then every product with search, filters, sorting and a spec-table view
— A quote list and an enquiry form that sends through WhatsApp or email, with no server

HTML, CSS, JavaScript, WebGL, GSAP, Lenis

MCML lab website · Built the website and console; launching with the lab's domain — Ready to launch

— The proven PCBL setup: public site, admin console, Supabase, Cloudflare Pages
— Its own identity: a Gram-stain palette, serif headlines, round seal shapes

HTML, CSS, JavaScript, WebGL, Supabase

Cantilever · Founder; designed and shipped the storefront — Prototype live

— A storefront for four kinds of architectural assets
— Curated and tagged, so the right asset is quick to find

React, TypeScript, Vite, Tailwind, Lovable

Notchie · Built it in Swift and SwiftUI; v0.1 packed as a disk image — Beta

— Allow or deny Claude Code's commands from the notch, through a hook and a private Unix socket
— Music with audio-reactive bars, clipboard history, calendar, timers, a file shelf and system stats

Swift, SwiftUI, AppKit, Core Audio, Vision

Clearance · Designing the app in Figma; planning and code next — Designing

— Five queues from Holding to Landed, on a radar and as flight strips
— Push-to-talk capture: say a task and Nimbus, the tower, files the flight plan

Figma, Design tokens, Prototype, iOS

OMNIA security console · Designed and built it solo — Live

— Severity-coded alert feed with filtering
— Typed data models, mock layer ready for a real API

React, TypeScript, Vite, Tailwind, shadcn/ui

Nebula.pdf · Built it; open source — Live

— Nine tools in one single HTML file
— OCR with Tesseract.js, fully client-side

JavaScript, Tesseract.js, pdf-lib, HTML

LAB WORK

— **Secure campus network lab**: Six VLANs, 802.1Q trunks, layer-3 SVIs
— **Home lab recon report**: Host-only network, no internet access
— **PhishLens**: Parses the Received chain into a readable timeline
— **DopeToken (ERC-20)**: OpenZeppelin contract, deployed with Hardhat
— **Tamper-evident audit log**: Append, verify and inspect from a small CLI

CERTIFICATIONS IN PROGRESS

Cisco CCNA 200-301	3 of 6 domains done; IP services in progress
CompTIA Security+ SY0-701	1 of 5 domains done; Threats and mitigations in progress

SKILLS

Web development	HTML, CSS, JavaScript, React, Supabase, TypeScript, Tailwind CSS, shadcn/ui, Vite, three.js and WebGL, GSAP and Lenis, Swift and SwiftUI, Git and GitHub, Accessibility
Networking and self-hosting	Router configuration, Static and dynamic routing, NAT and port forwarding, Localhost and LAN hosting, NAS setup and network shares, Firewall rules and port filtering, Host and network firewalls, DNS and DHCP on the LAN, Cloudflare Pages and Vercel. Learning: WireGuard VPN, Nginx reverse proxy and TLS, Docker for self-hosting
Network security	TCP/IP and subnetting, VLANs and trunking, Cisco Packet Tracer, OSPF routing, ACLs and port security, Wireshark, Nmap, VirtualBox home lab. Learning: Kali Linux, Burp Suite
Blockchain	Hashing and proof of work, Node.js, OpenZeppelin, Hardhat, Ethereum testnets. Learning: Solidity, ethers.js
Design and video	Figma, After Effects, Premiere Pro, Photoshop
